# BUSHMANS

*Saving Australia's Water*

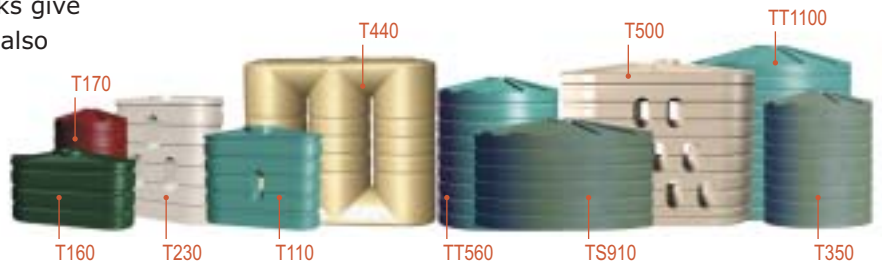

**BUSHMANS has**

# Water Storage Solutions

**to suit you.**

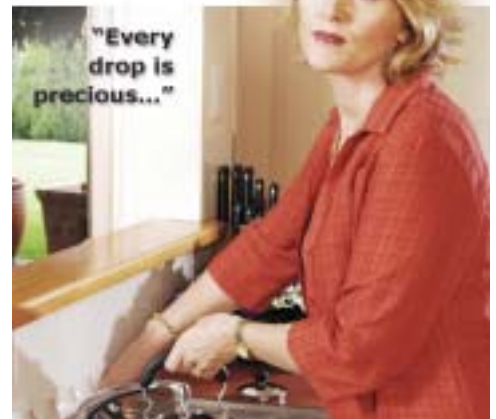

## For Residential Applications – doing your bit to save Australia’s water.

Even when connected to town water, everyone wants to do their bit to save Australia’s water – and nobody saves Australia’s water like BUSHMANS. Their domestic water tanks are available in sizes from 500 litres (110 est. gallons) to 10 700 litres (2 300 est. gallons) and are easily installed on residential properties. Not only will these tanks give you rainwater when you want it but they will also complement the appearance of your home and add value, while you do your bit to save Australia’s water. You can also choose from larger capacities up to 46 400 litres (10 500 est. gallons).

AS4766 Compliant Actual Litres	Product Description	Diameter		Wall Height		Apex Height		Dimensions (if applicable)	Price

## For Rural Applications – water when you need it.

When you rely on water for your business, indeed for survival, you have to have it when you need it. You can choose a BUSHMANS tank up to 46 400 litres (10 500 est. gallons) to provide water storage solutions for your needs. You can't make it rain but you can store it when it does and nobody saves Australia's water like BUSHMANS.

# Things to consider before you order your BUSHMANS tank –

## How much storage do you need?

Think about how you will use the water? For drinking only, the garden or general use? Some simple calculations will tell you whether you need a small, medium or large tank. There is a size in the BUSHMANS range to suit all requirements.

## How much water can you catch?

A simple calculation will determine your potential water catchment. Every m<sup>2</sup> of roof equals 1 litre of water for every 1 mm of rain. Multiply your total m<sup>2</sup> of roof area (roof pitch doesn't alter the amount of catchment) by your annual rainfall average and you will have the total potential catchment for a year. *Yes, it is amazing how much goes down the drain!*

## Where is it going to be sited?

You can mount your tank against a wall, on the ground or on a stand. Measure the space you have and select a tank to suit. If you need help deciding, call BUSHMANS freecall number 1800 00 88 88 for advice.

## What plumbing fittings do you require?

BUSHMANS supply and fit on delivery: a strainer, overflow and outlet. Extra fittings are available upon request.

Determine the plumbing fittings you will need to plumb into your domestic or rural system. Some local councils require pressure tested valves – you should check.

## Can you prepare the site?

Proper site preparation is essential to allow you to enjoy the long life of your BUSHMANS tank. Detailed guidelines will be supplied to allow you to prepare your site prior to delivery.

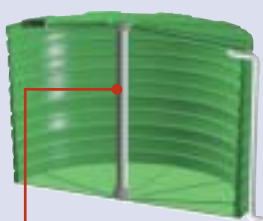

## What access will the delivery truck need?

BUSHMANS will deliver your tank to your door, access permitting. Check that areas such as gates, roundabouts, trees, bridge heights etc. will accommodate a truck of this size or discuss possible alternatives with your supplier or BUSHMANS.

21m x 2.5m x 5.2m tall (70' x 8' x 17')

## BUSHMANS quality control gives you peace of mind.

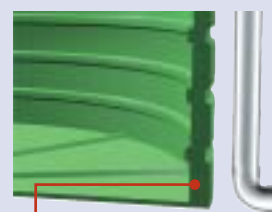

Roof pole in larger tanks for added safety

Ultra-sounding of tanks for additional quality control

Mosquito-proof mesh strainer

Thicker walls at base for added strength
